PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook for the Colorado economy, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

HIGHLIGHTS OF THE NATIONAL ECONOMY

1984 ended with a more than 4% employment growth rate, and the outlook for 1985 is for continued growth at a slower pace. The factors that sustained the expansive growth in 1984 were:

- A flexible monetary policy
- Continued expansion of the budget deficit
- Increasing import/export imbalances
- The continued influx of foreign investment into the U.S. as a result of the very strong dollar internationally.

These conditions have resulted in unprecedented problems confronting the administration and the Congress. The administration has submitted a budget to the Congress that would make very small inroads into these conditions, and the Congress is now faced with either adopting this budget or offering its own remedies. The prognosis is that whatever remedies are finally agreed upon and implemented, changes will not take effect for at least six to nine months. This will result in moderately strong employment growth during 1985. If the remedies include realistic cuts in defense and social programs as well as some increase in revenues, late 1985 and 1986 could experience slower growth or a possible recession. As the economy recuperates from the cutbacks in expenditures, moderate growth and expansion at a rate of 2-3.5% per year can be expected during 1987-1990.

National Industry Outlook

Mining - The oil and gas industry can expect another bad year. Prices are dropping, mergers are still occurring, bankruptcies are still being declared and a glut in the natural gas market are contributing factors to a less than bright year. Even if prices settle at $25 to $27 per barrel, demand for petroleum will soften if growth in both the U.S. and other industrial countries softens. Available cash for drilling new wells has dried up with falling prices and changes in U.S. tax laws.

The total deregulation of natural gas appears to be shelved for the current year as prices have been slipping.

The surging oil product imports are posing additional threats to the oil industry. Purchases of foreign gasoline and heating oil have doubled when compared to what they were three years ago, and could increase even more as Far East countries continue to add new refineries to their oil production.

The 1981-82 recession severely affected the nonferrous metal industry and the increased demand in 1984 helped to reduce existing inventories rather than trigger expansion. Even if demand continues into 1985, nickel, zinc and molybdenum will suffer if steel markets continue to decline. Also, the strong dollar and higher interest rates attract cheap foreign metals. The commodity markets are also suffering because investors put their money in paper holdings given the strength of the dollar.

Given this scenario between now and 1990, growth in this industry is not expected to exceed 1.5% annually.

Construction - 1984 was a banner year for the Construction industry; employment grew by one million, or 9% over 1983. This despite relatively high interest rates. Growth will be mitigated in 1985 because interest rates are not expected to decline dramatically. Available commercial office space is at a fairly high rate. State and local governments are wary of national legislation that will cut off or decrease revenue sharing or matching fund programs that helped highway construction and maintenance in the past. Since overall business expansion will be moderate, construction of new buildings will be scaled down. The residential housing market will respond to any changes in interest rates and will, therefore, be an unstable element. Long-term growth will average between 3.0% and 4.0% annually to 1990.

Manufacturing - The Manufacturing industry will encounter slow growth during 1985 and slower and possibly negative growth in 1986. The factors contributing to this projection are the relative high interest rates resulting in high borrowing costs, the strong dollar which is responsible for the continued increase in imported manufactured goods over exports, and the low inflation rate which requires manufacturers to increase efficiency and production. Growth in 1985 is expected at about 3% and probably down to 1.5-2% in 1986.

The high tech items such as computers, communications equipment and robotics will experience the highest growth in this industry, followed by electronic components. Textiles, chemicals and machinery still are confronted with hefty competition from foreign imports and if the high dollar value persists, the situation will worsen. Automobile manufacturers anticipate good sales in 1985, but as voluntary restrictions of Japanese imports ease in April, U.S. automobile sales will probably drop.

Transportation, Communication and Public Utilities - This industry sector has been traumatized by deregulatory legislation for the past several years.

Air transportation is still beseiged by takeovers, price wars and bankruptcies. In the long run it is hoped that improved service and competitive price structures will evolve, but the next few years will be difficult. The trucking industry is still poised for further deregulation and the future of the railroads is shaky.

The communications sector is gradually adjusting to the deregulation of a few years ago, and only minor adjustments will be forthcoming.

Total deregulation of natural gas seems to be on hold for the present.

During the balance of the 1990's, growth should be about 3.0% to 3.5% annually.

Trade - Retail trade is expected to grow between 2.8% to 3.2% during the last half of the 1980's. The largest number of new job openings will be in eating and drinking establishments. Other retail firms posting large gains will be department stores, grocery stores, new car dealers, and stores selling leisure time goods. These projections are based on the fact that the labor force will be a maturing one and that many families will have multiple earners, increasing the buying power of a large portion of the population. Retail shops projected to lose jobs include mobile home dealers, candy stores, children's wear shops and millinary shops.

Wholesale trade employment increases will be highest in establishments selling motor vehicles and electrical goods.

Finance, Insurance and Real Estate - Financial and banking services will continue their large gains in output as many new consumer services continue to expand such as electronic fund transfers and investment counseling. Employment growth on the other hand will be modest. Automatic teller machines, computerized banking and stock transactions will limit job gains to about 1.8% to 2.3% annually. Additionally, deregulation has forced establishments to operate more efficiently and in many instances this reorganization has resulted in job losses or declines in job growth rates.

Services Industries - Hotels and lodging places, business, professional, health care, hospitals and educational services generate the most jobs in this industry sector. These industries will continue to generate the most jobs, but at rates lower than those experienced in the 1970's. Employment growth will be between 3.2% and 3.9% per year.

Despite the increase in the population of 65 or older, employment in health care services will slow down. This moderation will result from cut backs in public programs, the emergence of consumer-shared insurance costs and the growing popularity of alternative health care concepts.

Government - This industry will continue its moderate growth levels of the 1970's through the 1980's.

By the late 1980's, state and local education needs may expand as the children of the World War II baby boomers enter the system, but this growth will be modest. The trend to curb government programs and therefore public employment may be offset by a recession and the need to increase programs to help the needy and the farmer. In any event government employment is not expected to exceed growth of about 1.0% to 1.4% annually.

COLORADO
INDUSTRY EMPLOYMENT OUTLOOK
(MAJOR DIVISION ANALYSIS)

Fiscal Year 1984 Review

Very expansive fiscal and monetary policies at the national level during the past four years set the stage for strong job growth in the Colorado economy during FY '84. Preliminary figures indicate that employment was expanding at a 3.6 percent rate during the period, adding 46,000 new non-farm wage and salary jobs to our economy. The rate of advancement for the period compares to a 0.7 percent growth rate during the preceding fiscal year and a 1.7 percent rate during fiscal '82. All major industrial divisions with the exception of the Mining sector showed positive growth for the year, with both the Trade and Service sectors generating over 12,000 new jobs each.

Unemployment for the period was estimated to average 5.6 percent of the labor force, substantially below the fiscal year 1983 level of 7.7 percent.

Fiscal Years 1985 Through 1987

The strong job expansion experienced by both the Colorado and national economies during the past fiscal year (and which has continued into the first half of fiscal '85) has its origins in: (1) the significant tax reduction policies initiated at the national level in 1981; (2) the expansive money growth policies put in place by the monetary authorities in '82 and '83; (3) increases in the federal debt since FY '80 totaling more than one-half trillion dollars; and (4) current capital inflows from foreign countries exceeding $100 billion dollars annually. The assumptions made regarding the performance of these four factors during the next three fiscal years will, for the most part, define the job generating capabilities of both economies.

Although congressional procrastination will be the rule during the first half of calendar 1985, current account deficits exceeding $100 billion dollars annually and yearly interest payments on the national debt surpassing $160 billion dollars will force the House and Senate to raise taxes (by whatever name) probably during the first half of fiscal '86 (July through December 1985).

For the most part, the transfer of purchasing power from the public to the private sector or from the private to the public sector is job neutral. Some of the transfers to the private sector since 1981 however, have, because of their influence on certain investment decisions created more new jobs (and investment redundancies, office space for example) in the short run than would have been created had the money been used for public sector purposes. These investment activities were undertaken with assumed rates of return being based on certain current tax advantages (the Accelerated Cost Recovery System, for example). As these advantages are reduced or eliminated, slower job growth can be expected in those industries affected by those changes. Additionally, as these lower rates of return on direct investment work their way through our economy they will tend to reduce the $100 billion dollar current deficit that is helping fund our present domestic consumption expenditures. This will probably cause additional job losses.

Coupled with the efforts to increase revenue will be renewed efforts to reduce the expenditure side of the national ledger. It is, of course, obvious that with an expected doubling of the national public debt between 1981 and 1986 (funded in part by monetizing a portion of that debt and in part by foreign creditors) a rather large number of the new jobs created during the past year, and currently, are being supported by the deficits being generated at the national level. As efforts to reduce these huge numbers are translated into actual reductions in outlays concomitant job losses will probably occur in both the public and private sectors. Substitute borrowers are not expected to be found to replace the reduced credit demands of the federal government to any large degree. Further, the assumption of a weaker dollar brought about by the deficit reduction efforts will accelerate the exodus of foreign money.

It seems rather improbable that monetary policy will come to the rescue and replace a significant portion of the losses in effective demand that are forecast to take place. Although primary expansion of the money supply may be attempted, the chances of any substantial secondary expansion taking place during the deceleration phase of a business cycle seems somewhat remote. And, given the size of our current deficits, the primary expansion itself would seem to be held back by the perceived threat of soaring inflation. Efforts to monetize portions of the national debt over and above current historical levels as a substitute for responsible fiscal policies would send strong negative signals to the various credit markets whose response would quite likely be very high interest rates.

Given these assumed fiscal and monetary policies at the national level, nonfarm wage and salary employment is expected to move up at about a 1.7 percent rate in the fiscal year beginning in July. This is substantially below the 3.1 percent forecast for the current fiscal year. In terms of the actual number of new jobs, growth is expected to drop from 41,000 annually to 23,600.

Over the moderately longer term, deficit reduction efforts have a very positive effect on accelerating the rate of new job formation in an economy. Responsible efforts to bring expenditures more in line with revenues at the national level send an immediate signal to the credit markets that the primary solution to the deficit problem will not involve significant monetization of the debt. It has been this monetizing fear that has kept long-term rates substantially above the inflation rate during the past two years. Reduced rates in the long-term market are of particular benefit to agriculture, housing and consumer durable purchases. Lower interest rates coupled with the lower rate of return expected on direct investment should result in more rational exchange rates. As the dollar declines in value relative to other world currencies some of the two to three million jobs that have been lost due to our expanding trade deficits should be recaptured. Interest payments made by the federal government to foreigners amount to some $20 billion dollars annually. A stabilization or actual reduction in this income leakage would help to provide more job opportunities for our own citizens. As additional deficit reducing policies are put in place, monetary policy can become a more viable tool for creating new effective demand, with more of the stimulative effects from this source going into new job creation rather than higher prices.

Should these corrections in fact take place, new job opportunities during fiscal year 1987 should surpass FY '86 levels by a substantial margin. Employment growth rates should approach fiscal '85 levels with the Colorado economy providing over 40,000 new nonfarm wage and salary employment opportunities.

The fiscal years 1986 and 1987 growth rate forecasts are predicated on timely congressional action being taken to at least partially resolve the federal deficit and current account deficit problem. If substantive corrective measures are not in place by the first quarter of fiscal year 1986, estimated growth rates for that fiscal year will be significantly higher than the 1.7 percent forecast. On the other hand, the interest rate and inflation repercussions resulting from such inaction would probably force both the national and Colorado economies into negative growth rate patterns during fiscal 1987 (July 1986 through June 1987).

(Major Division Industry Outlook)

The Mining Industry

Moderate rehiring in the metals sector of this major industry division should move current fiscal year mining employment above the levels experienced during FY '84. Looking ahead, implementation of the Comprehensive Fair Trade Program at the national level will limit annual steel imports to about 20 percent of the U.S. market. This should help stabilize or slightly increase metal mining employment numbers in fiscal '86 and '87.

A review of the oil and gas extraction sector indicates that world oil prices will probably continue to drop during the foreseeable future. However, as part of the deficit reduction program nationally a surcharge is expected to be placed on certain energy imports. Should such a policy be forthcoming it would tend to shield domestic production from international price levels that would be unprofitable in our local economies and lead to reduced activity in the short term. Additionally, drilling costs remain well below the levels of just a few years ago providing a further incentive to moderately increase the extractive activity of this sector. Given these two factors and the major employment adjustments that have taken place in oil and gas extraction during the past 18 months, the stage would seem to be set for a modest turnaround in employment levels during the fiscal year that begins July 1.

Primarily because of high transportation costs and surplus electrical generating capacity nationally, employment in Colorado's bituminous coal sector will probably remain unchanged at about 4000 employees during the next two fiscal years.

Given these industry specific assumptions and the overall economic framework previously defined, mining employment is forecast to grow at a very modest 1.5 percent annual rate during the period under study.

The Construction Industry

This industry contributed over 4000 new jobs to the Colorado economy during the fiscal year ending last June 30. Job growth during the current and ensuing two fiscal years is estimated to average less than half that figure. There are a number of reasons for the reduced forecast.

Although long-term rates in general have dropped about two points during the past six months, most mortgage rates have not experienced a comparable downturn. Currently, the effective rate on 30 year conventional fixed rate mortgages approximates 14 percent, basically the same rate that was in effect a year ago. This "stickyness" in the residential mortgage sector would seem to be the result of a combination of factors: excessive deficit financing, tight money policies and Euromarket borrowing. Deficits around the $200 billion dollar mark drain a significant portion of the economy's savings away from other potential customers one of which, of course, is the housing market. Tight money policies, by attempting to reduce the supply of credit in our economy, move interest rates up if the demand for credit remains unchanged. Euromarket borrowings as a surrogate for domestic lenders force more stringent domestic monetary controls to be implemented than would otherwise be the case in order to offset the inflow of this new effective demand. These more stringent policies fall more heavily on mortgage rates than long term corporate borrowing rates, since the latter can tap the Euromarket thereby effectively increasing the supply of credit available to it.

Figures in the local news media regarding the time needed to work off the office inventory surplus in the Denver metro area vary from approximately one to three years. Couple this excess inventory with an expected drop in the level of tax credits currently being made available to this type of capital investment, and the stage would seem to be set for reduced growth rates in the nonresidential portion of construction activity.

Deficit reduction efforts at the national level are expected to freeze or reduce highway funding, revenue sharing and urban development grants, all of which would impact the ability of this industry to maintain current employment growth rates.

The Manufacturing Industry

Notwithstanding the estimated 7000 new jobs provided by manufacturing firms during fiscal year 1984, employment at the beginning of the current fiscal year was still below pre-recession levels. No net new growth has been experienced. Rather, the recovery that began during the third quarter of calendar '83 has been strong enough to only recapture the number of jobs that were lost during the '82-'83 recession.

New employment opportunities in this industry during the next three fiscal years will probably average about 3400 annually, substantially below the 7000 figure experienced during the past fiscal year . Part of the anticipated reduction in job growth will be due to an estimated international manufacturing trade deficit averaging over $100 billion dollars during the next two years. Part will be due to transferring more of the labor intensive portions of our expansion to foreign countries. Escalating competition from U.S. firms residing outside our state and who provide competing product lines in our national markets will be a third factor influencing the level of new manufacturing job opportunities generated by our local economy. And finally, the degree defense expenditures are made a part of any deficit reduction efforts at the national level will have obvious effects on our local manufacturing employment levels. It is estimated that about one out of every three jobs in this industry is being supported by demand emanating from the Department of Defense.

The Transportation, Communications and Public Utilities Industry

Although some further moderate adjustments may be forthcoming, most of the discontinuities brought on by the deregulation of major portions of the communications sector of the industry have been completed. The same cannot be said for the air transportation component, however.

As we reach the midpoint of FY 1985, the pricing structure of much of the commercial airline industry is even more chaotic than in the spring of 1982. Price cutting and overcapacity, competitive responses to past deregulation efforts, portend additional employment adjustments in the sector. During the period under study no net growth is anticipated.

For the industry as a whole, employment growth should average about two percent during the next two years or about 2000 net new hires annually.

The Trade Industry

The wholesale and retail trade sectors added 12,500 new job opportunities to the Colorado economy during the past fiscal year. Given the estimated population growth during the same period of 2.6 percent (and an average annual rate of 2.3 percent since 1980), the job growth experienced in the industry during FY '84 was excessive. The over-expansion in the retail trade sector became apparent during the most recent holiday shopping season when early price reductions caused the season to be one long promotion. Future job expansion in the industry will be held back somewhat until these redundancies are eliminated either through employment reduction, faster population growth, or some combination of the two.

During the 36 month period which started last July, yearly net new hires in the industry are expected to average 9,100. Most of the job gains should center in eating and drinking places, miscellaneous retail establishments, and the durable goods sector of wholesale trade.

The Finance, Insurance and Real Estate (FIRE) Industries

Past statutory actions and, more recently, very basic structural changes taking place in our economy portend slower growth in this industry in the near term.

The deregulation of some sectors of FIRE that began in 1980 has, through expanding diversification and its accompanying crossover of services, produced significant amounts of redundant employment in this industry. As accelerating competition forces out some of this redundancy, growth rates can be expected to decline.

One of the primary constraints that has and will continue to slow growth in the Colorado economy, and particularly this industry, is the move from an inflationary economy to one of disinflation or actual deflation. An economy whose past growth was, to a large extent, controlled by energy, agriculture, metals and real estate will not fare very well in a disinflationary environment. Personal income and employment growth rates that were double the national average in the past will be hard pressed to equal that national average in the near turn. Loans that were made to the above-mentioned sectors presumed future high inflation rates that would continually increase the value of land, oil, silver and office complexes. As disinflation has become a major factor in our economy, interest has turned from making new loans, to collecting the old ones.

Growth rates in this industry that were almost six percent in FY '84 are expected to average half that rate during the next three fiscal years.

The Service Industry

Of the eight sectors of the Colorado economy under study this major division can be expected to provide the largest number of new job opportunities annually. It is a diverse area of economic activity comprising some 15 major service related groups. During a normal year, two of these major sectors will provide over half of the net new openings generated by the entire industry: business services and health services.

Contrary to popular opinion (and as was shown during our last recession) the industry as a whole is significantly affected by changes in the business cycle. For example, during the first quarter of calendar 1983 (the trough of our last recession) the hotel/motel sector was losing some 1100 jobs annually, while the business services sector was growing at a muted 600 jobs yearly. Twelve months later, when the local economy was well into the recovery phase of its business cycle, lodging places were experiencing new job growth of some 3000, while business services were expanding at a 9000 net new hiring level.

During each of the next two years the industry should provide some 12,300 new job opportunities. As previously indicated, over 6000 of these new opportunities will involve business and health services. Within business services a significant portion of the new hire increase will center in the temporary help portion of Personnel Supply Services. The additional hiring of contracted temporary help is a response by the business community to the structural changes of radically increasing competition and disinflation that are taking place in our economy.

The Public Administration Industry

The anticipated freezing or the actual reduction of federal funds supporting certain public administration functions in the Colorado economy will have obvious negative employment effects on this industry. On the other hand, the moderate downturn being forecast for fiscal year 1986 with the accompanying increase in unemployment will require additional public sector effort if a "safety net", as promised by Congress, is to be maintained. Taken together, the net effect should be a very modest 900 annual job increase during the next two years.

NATIONAL OCCUPATIONAL OUTLOOK

United States

Changes in population are among the basic factors that will affect employment opportunities in the future. The demand for workers in any occupation depends ultimately on the goods and services sought by the public. Population growth and shifts in the age structure of the population are two of the more important population factors that will affect future employment opportunities.

Population growth during the 1980's is expected to increase by about .9 percent per year. Continued growth will mean more people to provide with goods and services, causing greater demand for workers in many industries. The major mitigating factor to this hypotheses, however, is the ever-increasing percentage of imported products from foreign shores. Quarterly merchandise imports have increased from 62.5 billion dollars in first quarter 1982 to 80.3 billion dollars in second quarter 1984. This increase has continued despite efforts to control auto, steel, textile and other manufactured imports. A turn around in the high import levels could occur if the value of the dollar declined in international markets. Updated techniques and efficient quality control would result in more competitive price structures and could possibly reduce imports.

One result of this movement to import manufactured goods has been the changing employment between the goods producing and the service producing industries. Over two thirds of the nations' workers currently are employed in the transportation, communications, public utilities; finance, insurance and real estate; trade, services and government industries. Less than one-third of the country's work force are employed in agriculture, mining, construction and manufacturing industries.

It is anticipated that the services sector will continue to provide most of the new job-generation. The health care services will continue to provide more jobs than the average despite the high costs of health care because of the sharp increases in the population over 65 years of age. More home health care, social workers, nursing home care, nurses and practical nurses services will be required to care for this aging population during the late 1980's.

Establishments that provide a variety of business and professional services such as personnel supply, data processing and computer repair should also experience faster than average growth. Trade will probably rank second in new job formation, with eating and drinking establishments taking the lead.

It is expected that public sector growth will continue its slow growth of the 1970's.

The composition of the labor force will undergo some changes as a result of the changing age structure of the population. The aging of the World War II baby boomers has already swelled the ranks of the 25-44 year olds, resulting in a more experienced labor force. The drop in births during the 1960's and early 1970's will result in a smaller 14-24 population group, while the number of people 65 and over will continue to grow.

These changes will create greater competition for entry level jobs from a more educated labor pool. It is estimated that during the 1980's there will be a surplus of between two and three million college graduates. Many of these graduates will have difficulty finding jobs in the occupations of their choice and, therefore, will be competing with non-college educated workers for jobs that do not require college degrees. This phenomenon creates two problems, the college educated workers will probably end up in a job that is underutilizing his skills and education, and the persons normally competing for the job will be at a competitive disadvantage.

Growth rates among major occupational groups have been changing since 1960. White collar workers now represent half of the total labor force, up from 43 percent in 1960. Service workers have also risen rapidly, while the blue collar work force has grown slowly. Farm workers have declined.

During the 1980's, the demand for scientists, engineers and technicians will depend on the economy's ability to expand energy development and industrial production. However, the growing population 65 years and older will require greater medical and health services. Systems analysts and programmers will also be in greater demand as the use of computer resources increases.

Demand for lawyers, architects and accountants will be very competitive as they traditionally attract large numbers of applicants. Education related jobs will offer less favorable employment prospects as a result of declining school enrollments.

Managers and administrators occupations will experience moderate demand. Corporate takeovers and the large number of Chapter 11 bankruptcy proceedings have required management to reorganize its upper and middle management operations resulting in less demand for managerial and administrative workers. The demand for management trainees will continue its high pace because of the expected growth of fast food restaurants and quick service groceries.

Clerical workers will continue to represent the largest occupational group. However, this category will experience continual changes due to technology. More extensive use of computers will greatly increase the employment of computer and peripheral equipment operators, and typists will be retrained for word processing duties, while keypunch operators, stenographers, reservation and ticket agents will decline as technological advances reduce the needs of these workers.

Sales workers will experience moderate growth in conjunction with the increased building of shopping centers and stores. Longer operating hours and more stores will mitigate the effects of labor-saving merchandising techniques such as computerized checkout counters.

Craft workers in the construction sector are expected to be in higher demand, while railroad engineers and railroad car shop repairers will experience decreased demand. Advances in printing technology will mitigate growth in the printing crafts.

Transport operative workers will experience moderate growth rates, as will laborers such as garbage collectors, freight and stock handlers as machinery increasingly replaces manual labor.

Service workers will reflect the highest rate of growth during the 1980's. As reported above, this will be due to the aging population, the continuance of multiple family earners, putting greater demand on personal services, business services and leisure time services.

The total number of job openings expected in future years is the sum of openings due to growth and those arriving from replacement needs. Much of the discussion heretofore has been directed at growth demand.

The Bureau of Labor Statistics (BLS) addressed replacement need in the past, as openings due to deaths and retirements and these two factors roughly accounted for two out of three openings.

After several years of research, the Bureau has expanded the definition of replacement and developed a new method of estimating replacement needs.

The new BLS definition of replacement needs include persons who transfer to other occupations, those who stop working temporarily, and those who retire. It excludes deaths and emigration. The new estimating procedure puts replacement needs at five times the rate previously estimated. These new estimates also find that the distribution of replacement needs among the occupational groups vary considerably.

To assess the degrees of competition for jobs, information is needed about BOTH DEMAND AND SUPPLY. New graduates from colleges, vocational schools and training programs are only part of the supply quotients. The new BLS methodology through the Current Population Survey Report (CPR) provides new insights into the expected supply of workers in specific occupations.

Following are three illustrations using the newly-developed data.

> Physician: This occupation is an example of an occupation for which quantitive data on supply are readily available and fairly complete.
>
> Analysis of supply/demand relationship is facilitated by licensing requirements. The proportion of newly-licensed physicians who actually enter the profession is close to 100%. The supply consists primarily of recent graduates of U.S. and foreign medical schools as well as a small number who left the labor force temporarily for military service, disability or household responsibilities.
>
> The new data shows that less than 2% of physicians left the occupation in the 1980-81 survey. To assess future supply/demand relationships, openings during the 1980-1990 period are estimated to average 17,500 annually. Since the major source of new supply is expected to be medical schools both here and abroad, the number expected is between 19,000-21,000 annually indicating an oversupply. This oversupply is already evident in many areas of the country and the projection indicates this situation of oversupply may intensify.
>
> Registered Nurses: In 1980, there were approximately 130,000 job opportunities in this occupation; approximately 8% were due to employment growth, 23% due to replacement of nurses transferring to other jobs and 69% due to the need to replace nurses who stopped working. A review of supply data indicates that in 1980 70,000 of the individuals who completed nursing training entered the profession,

indicating that there are ample job opportunities each year for recent graduates. The data further indicates that the nursing occupation comprises a large pool of licensed but inactive nurses and, therefore, are an immediate source of additional supply, i.e., only 23% go to other occupations and 69% leave the labor force.

During the 1980-1990 period, increases in the number of nursing graduates is expected to be minimal, making opportunities for employment of new graduates as well as reentrants more available.

Food Counter Workers: Workers in this occupation usually are trained on the job, and are not required to have any special educational or vocational training.

In 1980, about 220,000 job openings were filled, 40,000 or 18% due to employment growth and 180,000 or 82% due to replacement needs. Almost 50 percent of all employees left this occupation during the year, half transferring to other occupations and half stopped working. Of those who left the labor force, the majority returned to school. Only about one in five transferred to other occupations. The 16-19 age group with a high school education or less were the largest single group of workers in this occupation. Only 15% of all openings were for full time jobs.

Over the 1980-1990 period, 270,000 annual average job openings are projected--20,000 due to growth and 250,000 due to replacement.

Young persons who are new entrants to the labor market comprise the largest group of workers in this occupation. Since persons of this age group (16-19) are expected to decline during this projected period, and demand is expected to increase, the opportunities for employment in this occupation should be especially good. Shortage of labor supply could result in increased wages and employee benefits. On the other hand, corporate planners may consider hiring other groups of workers to fill their needs.

The data below cites some of the occupations that will generate the most jobs during the 1980-1990 period.

Secretary
Nurses Aides/Orderlies
Sales Clerk
Cashiers
Professional Nurse
Truck Driver
Food Service Worker
General Office Clerk
Waiter/Waitress
Elementary School Teacher
Kitchen Helper

Accountants & Auditors
Trades Helpers
Automotive Mechanics
Blue Collar Warehouse Supervisor
Sales Representatives
Typists
Carpenters
Bookkeepers
Stock Clerks--Warehouse
Store Managers
Computer Systems Analysts

As cited in previous reports, less than 25% of these occupations require college education.

Slightly more than 25% of those occupations require some vocational education training and the balance are primarily jobs in which the workers receive on-the-job training.

During this 1980-1990 period, several occupations will experience decreasing demand, either due to new technologies, the demise of industries which utilized these occupational skills or changes in the age structure of the population.

Education:

College & University Faculty
Graduate Assistants
Secondary School Teachers
Audio Visual Special Education

Railroads:

Railcar Prepairers
RR Switch Maintenance Workers
RR Conductors

Printing and Publishing:

Photo Engravers
Letter Press Operators

COLORADO OCCUPATIONAL OUTLOOK

Services and Trade are the two industries that will generate the most jobs in the 1985-1990 period. Fifty percent of the occupations expected to be in demand during this period are heavily represented in these two industries.

The teaching occupations will begin a reversal of the past several years and demand will continue to increase as the children of World War II baby boomers enter the school systems.

Emerging and/or obsolete occupations will not be a significant source of occupational changes in the next five year period. As some occupations become obsolete, retraining into the emergent occupations is easily accomplished--such as typists can easily adapt to word processing skills, or typewriter and calculator repair and service workers can be retrained to repair and service computer hardware and terminals.

Other demographic factors will influence occupational demand as we enter the 1990's.

- The aging of the population both nationally and in Colorado will stimulate significant growth in jobs related to health care, geriatric social work, public housing and mass transportation. Between 1960 and 1970 the population 65 and over grew by 18.9%, and in the next decade, 1970 to 1980, the growth rate for this age group increased to 31.6%. Demographers expect this rate of growth to continue into the 1990's and begin to moderate by the year 2000.

- The presence of females in the work force will continue on a more permanent basis during the next 15-20 years. This will force the emergence of more and better day care facilities which will result in greater demand for pre-school and day care teachers and attendants, social workers, psychologists, counselors and coaches.

- The changing structure of industrial employment is significantly affecting the occupational, economic and social makeup of our society. The proportion of jobs in the goods producing industries (mining, construction and manufacturing) has dropped from 27% in 1960 to 23.3% in 1982, and is projected to continue to decrease to about 22.2% in 1990. These trends will result in decreasing demand for blue collar occupations and for a scaling down of the numbers of employees earning high wages. In the Denver Metropolitan Area in 1984, the three highest paid industries were Mining, Transportation and Manufacturing. Two of these three are in the goods producing sectors. The three industries with the lowest monthly earnings were all in the Service producing sectors: Trade, Services and Finance.

During the 1985-1990 period, the Colorado economy will generate the most jobs in the occupations listed below:

Waiter/Waitress
Sales Clerk
Cashier
Sales Representative
Secretary
General Office Clerk
Food Preparation Workers
Kitchen Helpers

Janitors/Porters
Accounting Clerk
Maids
Typist
Bookkeeper, Hand
Nurses Aide/Orderly
Stock Clerk, Warehouse
Delivery Route Workers
Store Manager
Professional Nurse
Truck Driver
Teacher, Secondary School
Supervisor, Blue Collar
Stock Clerk, Sales Floor
Accountants & Auditors

A comparison of the national list in the previous section shows that both in Colorado and the nation, occupations generating the largest number of jobs are very similar.

SERVICE DELIVERY AREA STATISTICS

GENERAL ECONOMIC ASSUMPTIONS UNDERLYING SERVICE DELIVERY AREA FORECASTS

In order to formulate a reasonable prediction of short-term employment growth in Colorado industry, it is necessary to begin by analyzing economic events on the national scene. Further, one must attempt to identify the salient dynamics of the national economy, be they political or economic, in order to impose a workable framework on the available data. The following is a brief discussion of economic events and issues which this analyst has judged to be primarily significant in determining the direction and strength of economic growth, and thereby employment growth, in the coming three years.

We begin 1985 with a number of rosy statistics. The Commerce Department announced that the Gross National Product grew at an annual rate of 6.8 percent in 1984. Personal income rose 0.5 percent in December 1984, while industrial production rose 0.6 percent and consumer spending rose a solid 1.2 percent in the same month.

Despite the obvious strong performance of the economy in the recent past, a closer look at underlying factors reveals several pressing issues. The growing federal budget deficit is a primary concern. The deficit for fiscal year 1985 is projected to be over $200 billion, even with optimistic assumptions about government revenue. The debt service cost, i.e., the amount that the government had to pay to finance the debt, comprised approximately 18 percent of total government outlays in fiscal year 1984. Debt Service has been the fastest growing major budget category in the 1980's. The problem is exascerbated by the fact that debt service is an outlay that is largely outside the control of Congress.

The growing federal deficit creates several real and potential problems. First, as the deficit grows, the credit demands of the government may clash with credit demands of firms and consumers, causing interest rates to rise. As the combination of high U.S. interest rates and generous tax policies lead to an overvaluation of the dollar on world markets, the level of U.S. imports increase relative to the level of exports. This leads to our second major issue, i.e., the trade deficit.

Real spending by businesses for capital equipment rose by twenty percent in 1984. However, domestic capital goods producers are selling fewer capital goods overall than they did in 1979. These seemingly paradoxical events can be largely explained by reference to the strong dollar, which makes foreign-made capital goods less expensive relative to U.S. made goods. Thus, many foreign and domestic buyers realize cost savings by purchasing foreign-made capital goods.

A more fundamental problem is that the effects of a fiscal stimulus created by deficit spending are somewhat dampened by domestic private sector spending on foreign goods. One estimate suggests that the trade deficit can so dampen the fiscal stimulus created by deficit spending so as to entirely outweigh it. In a very real sense, the current U.S. policy may be helping to finance recoveries abroad, partially and temporarily at the expense of our own.

Monetary policy becomes somewhat more powerful in the presence of floating exchange rates for currency. An expansionary monetary policy, by lowering interest rates, can reduce demand for the dollar and lower its exchange value relative to other currencies. This in turn would tend to make U.S. exports more competitive on world markets and lead to job creation in American industry.

It may be argued that the availability of lower priced imports are primarily responsible for the existence of stable prices in the face of the rapid expansion in the U.S. economy. However, the benefit of lower prices must be weighed against the costs of lower production and fewer job opportunities in the U.S.

A third issue to be addressed is whether the current high levels of consumer spending are sustainable. A continued rise in personal income would lead one to answer in the affirmative. However, several factors lead this analyst to think that consumer spending will rise at a slower rate in 1985 than in 1984.

It is likely that consumers satisfied a large degree of their pent-up demand for durable goods in 1984. While durable goods sales soared in most of 1984, so did consumer installment borrowing used to finance the purchases. Consumer debt stood at 17.2 percent of after-tax income in October 1984. The historical high was 17.9 percent of after-tax income in 1979, when interest costs were significantly higher. Retail sales fell 0.1 percent in December 1984, largely due to a 2.3 percent drop in auto sales. Even though short-term interest rates were declining in recent months, rates on auto loans have either remained stable or risen as a result of heavy loan demand. In short, it would appear that consumers are going to be careful about taking on more debt in 1985.

Finally, the Conference Board reported recently that their December survey of 5000 households indicated a sharp drop in consumer confidence. The number of consumers who labeled business conditions as "good" declined by over 4 percentage points from the previous month. Although the one-month decline certainly cannot be construed as decisive evidence that consumers will stop spending, it nevertheless may be an early indicator that consumers will begin to tighten their purse strings after two years of strong spending.

Given these and other minor considerations, we arrive at our assumptions on the character and magnitude of several key economic variables that will serve as a framework for our analysis of industry employment by Service Delivery Area.

1) Fiscal policy will remain relatively loose through FY 1986. It is expected by this analyst that Congress will settle on deficit cuts for FY 1986 that will total somewhere in the neighborhood of $30 billion.

   The monetary authorities will attempt to maintain the growth of M1 (cash balances and checking deposits) at a 5-7 percent rate through 1985.

   The dollar will decline somewhat on the world market, but its loss in strength will not significantly affect the balance of trade until FY 1987.

2) The overall price level will continue to increase moderately (4-7 percent annually), helped by low factor costs and the strong dollar. Wage increases, which on average trailed the rate of inflation in 1984, will not outpace productivity gains.

3) Consumer spending will rise at a slower rate in fiscal year 1986 than it rose in fiscal year 1984. This will result in slower growth in industrial production in fiscal 1986.

ADAMS COUNTY SERVICE DELIVERY AREA

ADAMS COUNTY SERVICE DELIVERY AREA

Adams County experienced a 3 percent growth rate in overall employment between the fourth quarter of 1982 and 1983. This was slightly higher than the 2.7 percent annual growth rate that the County experienced in the five year period between 1979 and 1983. Industries which exhibited relatively high rates of growth were Finance, Insurance, and Real Estate; Transportation, Communication, and Public Utilities; and Construction.

The four largest major sources of personal income in Adams County in 1982 were durable manufacturing; retail trade; transportation, communications, and public utilities; and services. Overall personal income was $12,514 per capita income in 1982, slightly above the state average per capita income of $12,202.

Mining should experience small employment gains in FY 1985, helped by slight production gains in oil and gas. Given our expectation of slower growth in industrial production in FY 86, employment in FY 86 will exhibit a slower rate of growth.

While work has already begun on the Horizon Center in Thornton, it is expected that relatively high interest rates will keep residential construction at a low to moderate level in FY 85, followed by a low rate of growth in FY 86.

The manufacturing sector is expected to exhibit a healthy employment growth rate in FY 1985, as demand for communication equipment, electrical and electronic equipment, and transportation equipment should remain strong.

Retail sales have been very strong in Adams County for the past year. Continuing increases in sales and stable prices should lead to strong employment gains in FY 1985, followed by slower growth in FY 1986.

Services employment is expected to increase at a healthy pace in FY 1985, helped by general increases in population and strong economic activity.

Overall, we expect Adams County employment to exhibit a 2.8 percent growth rate in FY 85, followed by growth rates of 1.5 percent and 2.4 percent in FY's 86 and 87, respectively.

ARAPAHOE SERVICE DELIVERY AREA CONSORTIUM

(Comprising the Following Counties)

Arapahoe

Douglas

ARAPAHOE/DOUGLAS SERVICE DELIVERY AREA

Arapahoe and Douglas Counties are two of the fastest growing counties in the State of Colorado. Indeed, Arapahoe County distinguished itself as having one of the ten most rapidly growing populations in the whole nation, according to a Dun and Bradstreet report issued in March of 1984. Abundant employment opportunities and affordable housing act as a magnet for many young people and in-migrants to the state.

Per capita personal income in the SDA stood at $14,312 in 1982, a 7.3 percent increase over the previous year. The State average per capita personal income in 1982 was $12,202.

Between the 4th quarters of 1982 and 1983, overall covered employment in the Arapahoe/Douglas SDA grew by 8 percent. Between 1979 and 1983 the growth rate in overall employment averaged 7.2 percent. In that five year period, the highest growth rates occurred in the transportation, communications, and public utilities sector (31.5%), and the mining sector (17.6%).

Several factors appear to be operating in favor of continued employment growth in the Arapahoe SDA. Construction of many commercial and residential projects is already under way, while others are scheduled to begin construction in the near future. The infrastructure continues to adjust accordingly. The construction of Colorado 470 will greatly improve transportation in southwest Arapahoe County. Population growth will continue to be strong, as employment and relatively affordable housing continues to grow.

Looking at selected industries, employment opportunities are expected to be abundant in the services division, with approximately 2700 new jobs in FY 1985. Growth should be particularly strong in health, business, educational, and personal services, as these sectors grow to meet the needs of a growing population.

Approximately 900 new jobs should occur in the finance, insurance, and real estate division in FY 1985, reflecting a growing need for financial and real estate brokerage services.

Approximately 600 new jobs are estimated to occur in the construction division in FY 1985, reflecting a large amount of construction activity and relatively stable wages.

Finally, we expect approximately 2400 new jobs in FY 1985 for the trade division, as rising incomes and stable prices serve to bolster trade activity in the area.

Overall, we expect a 5.5 percent growth in covered employment in fiscal year 1985, followed by a 3.1 percent growth rate in FY 1986 and a 5.1 percent rate in FY 1987.

BOULDER COUNTY SERVICE DELIVERY AREA

BOULDER COUNTY SERVICE DELIVERY AREA

Between the fourth quarters of 1982 and 1983, overall covered employment in Boulder County grew by 9.6 percent. This compares favorably with the 4 percent average annual growth rate that occurred between the fourth quarters of 1979 and 1983. Per capita personal income stood at $12,714 in 1982, which represented a 9.5 percent increase over 1981.

Economic events in Boulder County have been prominent in the headlines for the past several months. Layoffs have occurred at a number of Boulder County manufacturers, including Storage Technology, Beech Aircraft, Mini-Scribe, Otrona Advanced Systems, and Lestronics. While calculating the number of persons laid off is relatively easy, the difficulty lies in trying to estimate the overall effect the layoffs will have on the local economy.

While the initial employment losses occurred in the manufacturing division, the loss of income in the division will have some impact on other industry divisions. However, a portion of the lost wage and salary will be partially offset by income from other sources, i.e., unemployment compensation severance pay, and other family members who work. The crucial question is whether the laid-off workers will find other jobs before their temporary sources of income are exhausted.

Given the continuing high level of demand for high-technology products nationally, the demand for skilled and technical personnel to staff high-technology firms should continue to grow in FY 1985. Some portion of the laid-off workers will be able to find work in other manufacturing firms along the front range.

It is expected by this analyst that most of the secondary impact of the decreased spending, in terms of inhibiting employment growth, will occur mostly in the construction division. Secondary sources of income should help to buoy employment in the trade and services divisions, although employment growth rates will not be as large as they would have been in the absence of the layoffs. Sales of durable goods will probably be affected more than sales of everyday consumption items.

Approximately 900 net new covered jobs are expected to occur in Boulder County in FY 1985, representing a 0.9 percent growth rate. The loss of manufacturing jobs will be offset partly by gains in other industry divisions, most notably services (1000 new jobs) and trade (700 new jobs). Employment growth should pick up some speed in FY's 1986 and 1987, with approximately 1400 and 2600 new jobs, respectively, in those years.

DENVER COUNTY SERVICE DELIVERY AREA

DENVER COUNTY SERVICE DELIVERY AREA

During the five year period between the fourth quarters of 1979 and 1983, overall covered employment grew by an average of 1.4 percent per year. Divisions which experienced relatively high growth rates were mining (12.5 percent); finance, insurance, and real estate (3.5 percent); and services (3.2 percent). Between the fourth quarters of 1982 and 1983, covered employment in Denver County remained virtually unchanged.

Per capita personal income in Denver County in 1982 stood at $14,557, ranking second highest in the State only to Pitkin County. The $14,557 represented an 8.5 percent increase in per capita personal income over 1981.

Denver County will experience one of the lowest population growth rates of any SDA in the State during the next several years. Unlike most of the other Service Delivery Areas, Denver County is approaching its limits in terms of residential housing expansion and new infrastructure. This fact will tend to limit employment growth rates in Denver County, especially in the construction sector and the transportation, communications, and public utilities sector.

In the 12 month period ending in October of 1984, overall building permits were down 4.3 percent from the same period in the previous year, although apartment construction was up sharply. Between the fourth quarters of 1982 and 1983, employment in residential construction grew by 16.7 percent while employment in non-residential construction fell by 11.9 percent. The latter is probably partly a reflection of the continuing high office vacancy rate (20.9 percent in 1984) in the Denver area. The construction industry is currently under the influence of countervailing trends with falling wages acting to lower construction costs while relatively high interest rates act to prohibit many potential home buyers. In fiscal 1985, most of the slight growth in construction is expected to occur in residential construction.

In other industries, manufacturing is expected to experience a 1.9 percent increase in employment, with printing and publishing, lumber and wood products, and fabricated metal products accounting for a large portion of the gain.

Stable prices and strong consumer spending should help to buoy employment levels in trade and services. Approximately 60 percent of the new jobs occurring in Denver County in FY 1985 are expected to be in the trade and services divisions, partly reflecting the opening of the Tabor Center and the Tivoli Denver Center.

In FY 1986, higher interest rates, lower levels of consumer spending and smaller increases in industrial production are expected to lead to smaller employment gains than those that occurred in FY 1985. Overall, we expect a 2.1 percent growth in covered employment in FY 1985, followed by a 1.2 percent growth rate in FY 1986 and a 1.9 percent growth rate in FY 1987.

EL PASO COUNTY SERVICE DELIVERY AREA

EL PASO COUNTY SERVICE DELIVERY AREA

El Paso County continues to distinguish itself as one of the fastest growing regions in the state of Colorado. Between the fourth quarters of 1982 and 1983, overall covered employment in El Paso County grew by 6.4 percent, compared to an annual average 5.5 percent growth rate in covered employment between the fourth quarters of 1979 and 1983. Several factors have contributed to the rapid growth, among them the influx of defense contractors and the expansion of existing high-technology manufacturers.

The construction of the Consolidated Space Operations Center, which is expected to employ up to 5000 military and civilian personnel by 1990, has been a primary catalyst for land development and general construction activity. Land prices in the Colorado Springs area have skyrocketed since the announcement of the Space Center, as a host of major commercial and residential developments have already been announced.

The rapid growth in construction activity has created some problems, among them an oversupply of office space and apartment units. One estimate suggests that a three-year supply of apartment space is already in place. This fact should put somewhat of a damper on new apartment construction activity in the coming two years.

With continued strong demand for electronic parts and machinery and a steady influx of military spending into the area, along with the expectation of stable wage levels, the manufacturing division is expected to continue to add employment at a strong pace in FY 1985. Hewlett-Packard announced last spring plans to build a new facility in Colorado Springs that will employ about 700 people following its completion in August of 1985.

The rapid growth of population and income, coupled with the prospect of stable prices and wages, should serve to boost employment levels in trade and services in the coming three years. Growth should be especially strong in hotels and lodging places, business services, health services, and educational services. A number of major hotels and motels are scheduled to open in 1985 in the Colorado Springs area.

We expect covered employment to grow at a 5.4 percent rate in FY 1985, followed by 2.8 percent and 4.6 percent in FY 1986 and 1987, respectively.

JEFFERSON SERVICE DELIVERY AREA

Covered employment in the Jefferson Service Delivery Area grew by 1.7 percent between the fourth quarters of 1982 and 1983, compared with a five year (1978-1983) annual average growth rate of 3.4 percent. Per Capita Personal Income in the Jefferson SDA stood at $13,743 in 1982, up a percent over the previous year.

Several factors will serve to maintain a relatively high level of employment growth in the Jefferson SDA. Continuing increases in population will lead to increased demand for products and services in all of the major industry divisions. Increases in private and public spending should especially boost the manufacturing, trade, and services divisions. With one of the lowest vacancy rates for apartment units in the metro area (5.3 percent), construction of apartment units should continue at a strong pace.

Manufacturing has been a leading industry division in the past year. Martin Marietta alone added 2000 employees to its payroll in 1984. The additional income that these jobs provide to the SDA should help to bolster sales and employment in other industrial divisions.

Trade employment grew by 10.7 percent between the fourth quarters of 1982 and 1983. Employment in trade should continue to grow at a strong pace in FY 1985, helped by rising incomes and stable prices.

Given a growing population and increased construction activity, employment in the finance, insurance, and real estate division should exhibit moderate to high growth rates. Rising incomes and a stable economic environment should spur demand for mortgage loans and real estate services in the area.

Approximately 2900 new jobs are expected in the services division, as the growing population will spur demand for services. Growth should be particularly strong in the health, educational, and business services sectors.

We expect approximately 5700 new jobs in the Jefferson Service Delivery Area in FY 1985, followed by 2900 new jobs in FY 1986 and 5100 in FY 1987.

LARIMER COUNTY SERVICE DELIVERY AREA

LARIMER COUNTY SERVICE DELIVERY AREA

Covered employment in Larimer County grew by 5.8 percent between the fourth quarters of 1982 and 1983. Over the five year period between the fourth quarters of 1978 and 1983, covered employment exhibited an average annual growth rate of 2.8 percent. Major employing divisions, in terms of numbers of jobs, are services, trade, and manufacturing.

Personal income in the County stood at $10,531 in 1982, a 7.4 percent increase over the previous year. Major sources of income are durable manufacturing, state and local government, trade, and services.

Larimer is a county with tremendous potential for growth. It already boasts several major manufacturing employers, including Teledyne and Hewlett-Packard. Anheuser-Bush recently began preparations to build a major brewery near Fort Collins, contingent upon continued increases in their national beer sales. If completed, the brewery would eventually provide approximately 550 manufacturing jobs. The existence of a major university in Fort Collins and growing population should help to guarantee Larimer's potential for attracting other major employers.

Rising incomes and a steady population growth will spur demand for residential construction in FY 1985. A growing commercial sector should also lead to an increased demand for office space in the County. A 3.3 percent employment growth rate is expected in the construction division in FY 1985, followed by 1.3 percent and 4 percent growth rates in FY 1986 and FY 1987, respectively.

A growth in income coupled with the prospect of stable prices should spur employment growth in the trade and services divisions in FY 1985. Sales of durable goods are expected to fall somewhat in FY 1986, as a result of lower levels of consumer and business spending. Approximately 400 new jobs in trade and 700 new jobs in services are expected in FY 1985. In FY 1986, lower levels of spending should serve to dampen employment growth rates, with approximately 300 and 500 new jobs in trade and services, respectively.

Overall, approximately 1900 new covered jobs are expected in FY 1985, followed by 1300 and 1900 new jobs in FY 1986 and FY 1987, respectively.

RURAL JOB TRAINING SERVICE DELIVERY AREA

Given the large number of counties which comprise the Rural Job Training SDA, and the diversity of economic resources which constitute its base, the area will be viewed, for expositional purposes, in terms of two areas: that which lies to the east of the Rockies (Planning Regions, 1, 5, 6 and part of 7) and that which lies to the west (Regions 8, 9, 10, 11, and 12).

On the eastern slope, important primary (export oriented) industries are mining, manufacturing (mainly food transportation equipment, and printing and publishing) and agriculture. Many farmers are continuing to face severe difficulties, as the combination of high levels of debt holding and low crop prices have squeezed farm incomes.

Although employment in oil and gas exploration increased somewhat between the first quarters of 1983 and 1984, continuing falling prices in the industry are expected to lead to curtailed production and employment in FY 1986.

Coal is primarily used as an input in the production of mass-marketed electricity, and in the production of steel. Thus, demand for coal would generally tend to follow population trends and economic swings. However, the general decline in energy consumption in the past five years has led to a general decline in the consumption of coal. The decline in domestic steel production and increasing steel plant modernization has also reduced the need for coal. Although the coal industry will probably not suffer the severe employment losses that characterized it in the early 1980's, employment in coal mining is expected to show little growth in the next three years.

With a slow rate of growth in population and stable or slow growth in basic industries, employment in construction, trade, and services is expected to grow at a relatively slow pace in the next three years.

On the western slope, Planning Regions 10 and 11 are still feeling the effects of the decline in energy development in 1981 and 1982. All major industries have been affected by the lost income resulting from the decline in oil shale development by major oil companies, and the decline in oil, coal, and uranium prices. Prices for these commodities are expected to remain stable or decline in the next two years. A revival of oil shale development in Region 10 may be in the offing if the U.S. Synthetic Fuels Corporation provides loan and price guarantees for the Cathedral Bluffs shale project. Meanwhile, officials in Region 10 are redoubling their efforts to attract new businesses to the area.

Planning Regions 9 and 12 have been among the leading regions in the SDA in terms of employment growth, largely due to many major expansion projects occurring in the ski industry. Purgatory Ski Area in LaPlata County is in the midst of 10 year, $250 million expansion, adding housing, trails, and infrastructure. In Region 12, several ski facilities are undertaking expansions or capital improvements. Employment in the construction, trade, and services division is expected to grow at moderate to high rates in FY's 1985 and 1986.

Overall, we expect approximately 5100 new jobs in the Rural Job Training SDA in FY 1985, followed by 2700 jobs in FY 1986 and 5100 in FY 1987.

PUEBLO SERVICE DELIVERY AREA CONSORTIUM

Although bad economic news dominated the picture in the Pueblo SDA in the first part of the 1980's several events in the past year have brightened the picture considerably. Amax Inc. resumed production in its Climax and Henderson molybdenum mines in 1984, providing a substantial boost to payrolls in the northern portion of the Service Delivery Area. In March of 1984, Sperry Corporation announced plans to build a navigational computer manufacturing plant in Pueblo County, and then in December announced it would build a materials management and distribution center near the manufacturing facility. All told, the facilities are expected to employ between 1300 and 1700 people by the year 1988. Other manufacturing companies that have announced plans to build in Pueblo are Steria Company, a maker of sweeteners, and Proto Corporation, a designer and manufacturer of computer cabinets.

The joint efforts of state and local officials to stimulate industrial development in Pueblo County have begun to reap dividends. A combination of aggressive recruiting and generous economic incentives (i.e., inexpensive building sites and free water and utility hookups) along with a large available labor supply have led a number of employers in the nation to take a close look at locating in the Pueblo area. It would appear that Pueblo County is well on its way to reestablishing its manufacturing division as a major source of income.

Another factor which would tend to make Pueblo attractive to potential employers, as well as the current labor force, is its very low cost of living. In a recent survey conducted by the American Chamber of Commerce, Pueblo distinguished itself as having the lowest overall cost of living out of 240 U.S. cities that were surveyed. A low cost of living provides an automatic boost to the purchasing power of Pueblo residents relative to residents in higher cost cities, given similar wage levels. This, in turn, would tend to boost employment levels in the trade and services divisions.

Mining employment has achieved a stable level in the past year, with Amax molybdenum adding approximately 1400 to its two mines that were virtually shut down for over a year. Molybdenum is used as a hardening agent in steel, the demand for which has risen during the economic recovery. Despite the recovery, domestic steel producers have been hurt by rising steel imports, which accounted for approximately one-fourth of steel tonnage sold in 1984. Although the Amax mines are operating on a much leaner basis than they were four years ago, maintenance or growth of current employment levels will largely depend on a continuing steady increase in the worldwide demand for steel.

Overall, approximately 800 new jobs are expected to occur in the Pueblo SDA in FY 1985.

WELD COUNTY SERVICE DELIVERY AREA

WELD COUNTY SERVICE DELIVERY AREA

Between the fourth quarters of 1982 and 1983, overall covered employment in Weld County increased by 4.4 percent. Industry divisions posting strong gains during this period were construction (21.4 percent), and Trade (5.4 percent). Per capita personal income in the county stood at $10,411, a 4.6 percent increase over the previous year.

Major employing divisions in Weld County are services, trade, and manufacturing. Within the manufacturing division, important sectors are photographic supplies and meat packing. Both of these industries operate in extremely competitive markets. Photographic supply manufacturers have been forced to respond to increased competition from low-cost foreign manufacturers by streamlining operations in domestic plants, often resulting in personnel layoffs. This occurred at Kodak's Windsor plant in 1983, when 400 workers were laid off. Foreign manufacturers gain a further advantage when the strength of the dollar relative to foreign currencies makes foreign-made goods cheaper than American-made goods.

A good example of this phenomenon is the shutdown of the Bayly Manufacturing Plant in Greeley, a maker of private-label jeans. Apparel imports increased dramatically in 1984, resulting in competitive problems for domestic producers. This, along with declining jeans sales in the U.S., created severe problems for the Bayly plant.

The meat-packing industry is also currently operating under low profit margins. Factor costs have fallen in the past several years due to falling wages and low costs of grain. However, a stagnant market for meat products and low prices received by packers for its final product have squeezed profit margins. Changing consumption patterns on a national basis have resulted in a partial shift away from beef and pork toward other protein sources. Stability or growth of employment levels in the meat-packing industry will be contingent upon growth in the national market for meat products.

Employment in the trade and services division depend largely on increase in population and aggregate demand, as well as stable price levels. Conditions are expected to be favorable for these industries through FY 1985. Lower employment growth rates are expected to be prevalent in FY 1986, due to higher interest rates and lower growth rates in consumer spending.

Approximately 900 new jobs are expected in Weld County in FY 1985, followed by 400 jobs in FY 1986 and 800 in FY 1987.

SDA 20 Weld County

MONTHLY YEAR TO DATE
FOR PERIOD ENDING 12/31/84

APPENDICES

A NOTE ON THE DATA

The analyses of each Service Delivery Area is based on ES-202 data, which is supplied to the State of Colorado by all employers who are subject to the Colorado Employment Security Act. One of the items available in this data base is the number of persons working for each employer. These numbers are arranged by the Standard Industry Classification code and then aggregated.

With the exception of the table being presented on page 57, all employment analyses allocate Government employment to those private sector industries where comparable activity is being conducted. For example, public sector education is allocated to the major division of Services, and further to the 2-digit SIC Educational Services. Public Administration employment, since it has no private sector counterpart, was not allocated and is not a part of any employment analyses except on page 57, where it is included in the Government division.

Because most Agricultural, Livestock and Crop Production employment is not covered under the Colorado Employment Security Act, the ES-202 series cannot reflect this employment. This point should be kept in mind when reviewing the Agriculture, Forestry, and Fishery division comment under the Service Delivery analysis. Total Agricultural employment is reflected in the Agricultural estimate provided in the table on page 57.

The National Outlook, Colorado Outlook and Service Delivery Area Outlooks were analyzed by different staff economists. Minor differences of opinion, therefore, may be reflected in each of these presentations.

METHODOLOGIES USED TO ESTIMATE YOUTH POPULATION AND LABOR FORCE BY COUNTY - FISCAL YEAR 1985 ANNUAL AVERAGE

I. Population

The 1980 Census gives us the proportion of the total county population that 16-21 year old persons represented at that time. Population projections of the Census Bureau indicate that between 1980 and 1990, the 15-19 age group's share of the total Colorado population will decline by 2.8 percentage points. The 20-24 age group's share of the state population is also projected to decline by 2.8 percentage points. Therefore, it was assumed that the age 16-21 share of the state population will decline by 2.8 percentage points between 1980 and 1990, or .28 percentage points per year. At this rate, the fiscal 1985 youth proportion will be .85 percent of the same proportion in 1980. Thus, each 1980 county youth proportion was multiplied by a factor of .85 to arrive at an estimate of the fiscal 1985 youth proportion.

The ratio arrived at by using the above procedure is then multiplied by our estimate of the total county population for fiscal 1985. This yields our 16-21 population estimate for fiscal 1985.

II. Disadvantaged Youth Population

In this analysis, we define disadvantaged youth as the number of age 16-21 individuals who exist below the federally defined poverty level. The 1980 Census provides us with county estimates of the proportion of the total poverty population that youth disadvantaged comprised. We need a source to tell us if and by how much this proportion has changed since 1980. We are able to discern this change on a national basis by using the annual Census publication: Characteristics of the Population Below the Poverty Level. From this, we see that the disadvantaged youth to total disadvantaged ratio increased by eight-tenths of a percentage point between 1980 and 1982. In order tc extend this increase to December of 1984 (a midpoint of FY 1985) we multiply the eight-tenths of a percentage point bv a factor of 2.5. The result is a two percent increase between 1980 and FY 1985. We apply this factor to the ratio in the area that we are estimating. For example, the above ratio was 15.8 percent in Adams County in 1980. In the year that we are estimating, it becomes (15.8% x 2.0%) + 15.8% = 16.1%. We then apply this new ratio to our estimate of total poverty population for Adams County in the appropriate fiscal year (given in the table: "Individuals Requiring Employability Services", Annual Planning Information Report).

We follow the same logic in our estimate of disadvantaged adults, i.e., we begin with an adult disadvantaged/total disadvantaged ratio for Adams County from the 1980 Census, or 48.8 percent. From Characteristics, we observe that nationally, this ratio decreased by four-tenths of a percentage point between 1980 and 1982. Extending out to FY 1985, 2.5 x 0.4% = 1.0%. Thus, the Adams County estimated ratio for the current year would be: (48.8% x .99) = 48.3%. We then apply 48.3 percent to our estimate of total poverty population.

III. Labor Force

Base year (i.e., 1980 Census) age 16-21 labor force estimates are available from Report 3 of the EEO Special File. A participation rate and an employed/labor force ratio are calculated from the above. Then steps are taken to try to ascertain if and by how much these ratios have changed since 1980. We observed from national data that the youth labor force participation rate is approximately 95.6 percent of what it was in 1980. Thus, we apply a factor of .956 to each county labor force participation rate from the 1980 Census.

Similarly, national data shows us that the youth employed to labor force ratio is 94.3 percent of what it was in 1980. Therefore, a factor of .432 is applied to each county employed/labor force ratio from the 1980 Census.

After the updated ratios are calculated, they are applied in their proper order to our current youth estimates. That is, the current youth labor force participation rate is applied to our current youth population estimate from Section I above. This yields our current estimate of youth labor force for the county. Given this, we apply our current employed/labor force ratio to arrive at an estimate of employed.

Youth unemployed is calculated by simply subtracting employed from labor force. The resulting figure is divided by labor force to yield an unemployment rate.

IV. Unemployed Disadvantaged Youth

Nationally in 1982, the disadvantaged 16-21 unemployed was 24.0 percent of the total 16-21 unemployed. Second, disadvantaged 16-21 individuals comprised 16.2 percent of the total 16-21 population. Dividing the former figure by the latter, we arrive at a factor of 1.48. This factor was used to inflate our county ratios of disadvantaged youth population to total youth population. The resulting adjusted ratio is then applied to the total youth unemployment figure to arrive at an unemployed disadvantaged estimate.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York, and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each October 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contracts can be targeted in areas experiencing high structured unemployment.

The reference period used in preparing the current list of labor surplus areas was January 1982 through December 1983. Because the national unemployment rate was above 8.3 percent, the 1.20 ratio was not used and the "ceiling" concept was used instead in preparing the annual listing. As a result, areas were included on the annual labor surplus area listing if their average unemployment rate during the reference period was 10.0 percent or above.

The new annual listing of labor surplus areas issued by the Department of Labor is effective October 1, 1984. The listing will remain in effect through September 30, 1985.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the Governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA - Job Training Partnership Act

Job Development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA - Labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-established employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (g.v.). This term is applied to WIN registrants only.

Placement - the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office completed all of the following steps: (1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) made prior arrangements with the employer for the referral of an individual or individuals; (3) referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) verified from a reliable source, preferably the employer, that the individual had entered on a job; and (5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program

JTPA - Job Training Partnership Act
